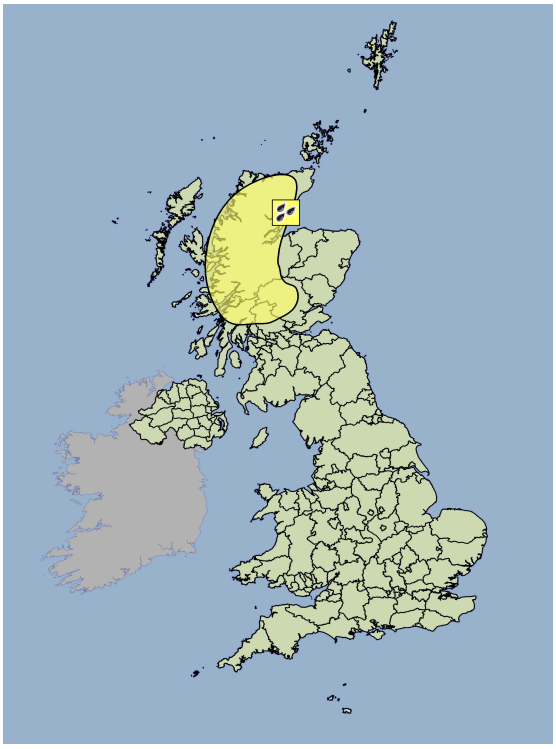
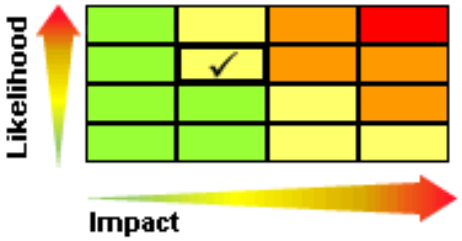
National Severe Weather Warning Service





Chief Forecasters Assessment
A large, vigorous area of low pressure is expected to move eastwards across the Atlantic on Sunday, passing just north of Scotland on Monday. The associated fronts will bring heavy rain Sunday night, this clearing to showers for Monday. 20-40 mm of rain is expected widely across much of northwest Scotland, with 60 mm possible in the Northwest Highlands.

There remains some uncertainty regarding the exact track and depth of this system, and this alert will be updated in the coming days as new information becomes available.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Mon, 01st Feb 2016** until **21:00 on Mon, 01st Feb 2016**

Outbreaks of rain will spread from the west on Sunday night, preceded by snow on high ground. The rain will turn heavy at times, and while it will turn showery during Monday, these showers will remain frequent and heavy at times. The combination of rainfall and snowmelt will lead to localised flooding.

Please be aware of the risk of some travel disruption.

Note that severe gale to storm force winds are also expected for which a separate warning has been issued.
